

Expression of Interest of Hosting HKIX Satellite Site

From time to time at a frequency determined by the Governance Board of HKIX, HKIX will consider the viability of building additional satellite sites around Hong Kong by collaborating with different commercial data centres. This initiative aims to allow HKIX participants to connect to HKIX more easily and at lower cost. While it is expected more HKIX participants will connect to HKIX, this initiative will also help HKIX satellite site collaborators get more potential HKIX participants to colocate their equipment in collaborators' data centres. This should create a win-win situation for HKIX and HKIX collaborators.

If any commercial data centre is interested in this initiative, it may send email to liam AT hkix.net for further details.

There are minimum requirements for the commercial data centres to join this initiative. No exclusivity will be granted to any collaborator(s) throughout the implementation.

There is no closing date for this EOI. HKIX reserves the right to extend or to close this EOI any time at its sole discretion.
